Legislative History of the Animal Welfare Act: Introduction

Breeds in animal husbandry has changed a lot with the use of breeding and gene technology. Till 1980s livestock products demands have been met by breed substitution, cross-breeding, and within-breed selection. But these demand in future is to be met using new techniques such as such as artificial insemination and more specific selection techniques.

Animal husbandry is the branch of agriculture concerned with animals that are raised for meat, fibre, milk, or other products. It includes day-to-day care, selective breeding and the raising of livestock. Husbandry has a long history, starting with the Neolithic revolution when animals were first domesticated, from around 13,000 BC onwards, predating farming of the first crops.

Evaluation: The evaluation consists of two components: (1) continuous evaluation through assignments, and (2) term-end examination. Students must pass in both these components of a course to earn the credits assigned to that course. In the final result, the assignments of a theory course carry 30% weightage while 70% weightage is given for the term-end examination.

Aubrey H. Fine, Alan Beck, in Handbook on Animal-Assisted Therapy (Third Edition), 2010 1.3 Defining the human/animal bond. Turner (2007) points out that the human/animal bond is a well-documented phenomenon that has been around since humans began domesticating animals. The strength of the human/animal connection allowed companion animals to quickly adopt roles as members of the family.

Human-Animal Bond - an overview | ScienceDirect Topics

There are several parallels between animal and machine learning. Certainly, many techniques in machine learning derive from the efforts of psychologists to make more precise their theories of animal and human learning through computational models. It seems likely also that the concepts and techniques being explored by researchers in machine ...
