"Hinton had this idea a long time ago; he called it a thought vector. Any thought that you can have, we can represent with a vector. The reason that's interesting is that, we can represent anything in the graph, but to have that work well in unison with a deep-learning model, we also have to have, on the other side, something that we can represent anything with.

You can improve the startup time of your .NET Core application by compiling your application assemblies as ReadyToRun (R2R) format. R2R is a form of ahead-of-time (AOT) compilation. R2R binaries improve startup performance by reducing the amount of work the just-in-time (JIT) compiler needs to do as your application loads.
